

ELECTRIC MOTORS FOR MACHINES WITH WASHING CYCLES AND FOR USE IN THE FOOD SECTOR

**STAINLESS STEEL-
ALUMINIUM CASING**

This series of motors is the end result of extensive research carried out by I.S.G.E.V., which analysed the ideal operating conditions for applications in the food processing and packaging sector where the motor is normally exposed to high-pressure washing with caustic solutions.

These electric motors are available with a power rating of up to 7.5 kW.

Thanks to their complete watertight construction with anti-corrosion materials, unventilated and unpainted, these motors stand out for being able to work under extreme operating conditions. With outstanding mechanical and electrical features (all motors have class F insulation but are used within class B limits), they are the natural answer to the demand for electronic drives (Inverter).
